IVÃ MUNHOZ
FRONT-END DEVELOPER

💼 EXPERIENCES

TypeScript React Developer
01-22 | present

Alfa Mercúrio · 📍 remote
- The front-end stack consists of React-TS, Redux Saga, Sass, Ant Design.
- It's a task-oriented job, paid hourly.
- Most of the code I made has already been deployed to production.
- I'm a trusted partner that can be left alone to do my tasks and deliver them in time.

React & Node.js Developer
08-21 | Dec/21

Codefrog Systems · 📍 remote
- I created most of the Components of an accounting application.
- The front-end stack consisted of React.js, Styled-Components, Formik and Yup
- The front-end consumes a RESTful API, which was built in Node.js using Express.js framework.
- This API provides data stored in a SQL server hosted at Azure.
- I also made a few changes in the backend code whenever they were needed during the creation of the front-end.

Proofreader
2019 | 2021

Brazilian Journal of Social Sciences · 📍 remote
- Proofreading of scientific papers, including grammar, spelling and style.
- Double-checking of References.
- Formatting of scientific papers according to the journal's standards.
- Created a company to offer these services. I do my own finances, issue invoices and discuss details with clients.

Translator
2015 | 2020

Freelancer · 📍 Remote
- Instructions Manual Translation: "Instructions to Authors: Scielo Norms", Portuguese to English.
- Book Translation: Terry Pratchet's "Soul Music", English to Portuguese.
- Book Translation: Tohei Koichi's "A Guide to breathing with Ki", English to Portuguese.

English teacher
2012 | 2020

Several schools · 📍 Curitiba, Paraná, Brazil
- Worked always as a team member with my superiors and general staff.
- Managed my own time and setup.
- Adult students were treated like clients who could never be lost.
- Hold seminars and mock meetings among corporate students.

📁 SELECTED PROJECTS

Agora Social Network
MERN application Production ready - *agora-social.herokuapp.com*
- Custom made Full stack project which connects to a MongoDB in the cloud.
- It features user authentication with Jwt, Posts with comments and likes, user following and profile page.
- The back-end was created using Express.js and the front-end used React.js.
- Completely styled and modularized with Material UI, which makes it easy to adapt this model to real situations and to change themes.

Noam - Syntax Tree Generator
Original educational application
- Educational app which aims to be a graphical tool make it easier to understand the syntax-tree theory.
- Follows the principle of Gamification to engage usage.
- Opensource React application.

Marvel API consumer - An interview challenge
https://github.com/iamunhoz/react--api-consumer-challenge
- This single page application fetches data from an API about superheroes and builds a table with the results.
